

UG-1 Under Ground Slip Joint

As an injection packing type, this product absorbs displacements and is applied for thermal expansion and contraction. Injection packing has been applied.

Features

- Injection packing type single slip joint.
- Absorb displacements in straight line direction : It can be used for extremely high-temperature fluid.
- Internal & external guide structure has longer life span than other conventional slip joints.
- External guide with outstanding lubrication ensures smooth slip.
- Safe packing injection is available with internal pressure.
- Double-structure product ensures thermal insulation (for underground use).
